27 October 2026

I have known Maya Chen for four years as her university counsellor, and it is a pleasure to recommend her for Data Science.

Maya is at her best when a local problem can be measured. In Year 12 she built a network of six air-quality sensors around our campus and wrote the live dashboard that our facilities team still checks every day [1]. She then cleaned 40,000 readings in Python and traced a lunchtime pollution spike to the canteen extractor, which the school has since moved [2].

Her Biology internal assessment went well beyond what the course asks, fitting a growth model to twelve weeks of data [3]. She co-founded a Friday STEM club for Year 7 girls that now has fourteen regular members [4].

Maya is also a natural leader under pressure. She is one of the most curious students I have worked with.

Ms Ruth Adeyemi
University Counsellor

1. **Air-quality sensor network**, 14 Mar 2026. Teacher-endorsed `NIST-1TGBH2`
2. **Air-quality data report**, 28 Mar 2026. Student-added `NIST-1SMXSL`
3. **Biology IA: modelling algae growth**, 20 Apr 2026. Teacher-endorsed `NIST-1TGTG6`
4. **CAS: STEM club for Y7 girls**, 1 Oct 2025. Teacher-endorsed `NIST-1TQW7D`
